You are cordially invited to a virtual event, organized within the framework of the Geneva Environment Network, featuring the outcomes of the new analysis ‘State of Finance for Nature in the G20’ by the UN Environment Programme (UNEP), the World Economic Forum (WEF) and the Economics of Land Degradation (ELD) Initiative hosted by the Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) in collaboration with Vivid Economics.

Total investment in nature of USD 8.1 trillion is required between now and 2050 – while annual investment should reach USD 536 billion annually by 2050 – to successfully tackle the interlinked climate, biodiversity, and land degradation crises, according to the State of Finance for Nature report released in May 2021. G20 countries make up approximately 53 per cent of this total annual investment and have the capacity to meet this investment need as they carry out most of the global economic and financial activity with fiscal leeway.

The new analysis to be presented at this event attempts to capture the complete amount and future needs for G20 spending on land-related nature-based solutions assets and activities.

This session aims to present the findings of the State of Finance for Nature in the G20 while hosting a discussion about the importance of closing that 4.1 trillion gap and the recommendations in the report to make it possible.
