Tech4Nature

Scaling up the use of digital technologies to drive the effective and equitable management of protected and conserved areas: Tech4Nature Initiative

World Wildlife Day 2024, 4 March 2024
Dao Nguyen, Senior Programme Manager, Conservation Action

Tech4Nature's Vision & Goal

Vision: To scale-up success in nature conservation through digital technology innovation.

Goal: By 2026, the Huawei-IUCN Tech4Nature partnership will enable more than 300 global protected and conserved areas to use Technology to evaluate their nature conservation success.

- These 300 areas will successfully conserve species and ecosystems through fair and effective management and monitoring activities, using technology, as measured against the IUCN Green List.
- The IUCN Green List Standard will measure and certify impact and contribution of these 300 protected and conserved areas to nature conservation and the Sustainable Development Goals.

3 Years

30+ Countries

Key species and
ecosystem types

6 Flagship
conservation success
cases

300 Protected Areas

Tech4Nature's objectives

- Bridging the Gap Between Science and Conservation Action
- Identification and Protection of Critical Habitats
- Effective Management of Protected Areas
- Global Impact and Collaboration
- Supporting the Kunming-Montreal Global Biodiversity Framework
- Species Monitoring and Protection
- Community Involvement in Conservation
- Efficiency and Effectiveness in Conservation
- Transparency, Inclusivity, and Responsibility

TECH4NATURE

A PARTNERSHIP FOR OUR PLANET

Innovative Technology and Digital Solutions for Fair and Effective Area-Based Conservation

5 Flagships - success stories for Tech4Nature

China — Acoustic monitoring and AI tech

Species

- 100K acoustic records compiled
- 4G signal **real-time transmission** from 5 acoustic devices
- A preliminary recognition model established to help develop **auto-recognition algorithm**

Switzerland — carbon measurement in PCAs

Mountain

- **Methodology developed** in Urnasch forest reserve based on the IUCN Green List
- **Global outlook**, can be an attractive complementary financing model for PCAs
- **Outcomes presented** to the Swiss Parks Network

Mauritius — Tech for community coral conservation

Marine

- 20,000 coral fragments have been transplanted in degraded reefs and attracting endemic species
- **Involvement of local fisher community** in coral farming through an ongoing awareness campaign
- Site proposed to government to be a marine PA
- **Underwater live cameras** installed to feed into new app help monitor corals and detect invasive species

Spain — Digital solutions to monitor tourism impacts

Urban

- 4 PAs studied with recommendation in tech use
- 1 **Pilot site** (peri-urban to Barcelona) using digital fencing to monitor key endangered bird (Bonelli's eagle) reaction to visitation
- Involves **local government** and **academia (University of Girona)** for algorithm development and data analysis

Mexico — Camera + acoustic monitoring of key species and ecosystem

Wetland

- 20 camera traps + 70 AudioMoths installed
- 49 species identified, incl. 5 jaguar individuals using camera traps
- **Community-centred approach** and collaborations (local government and communities, university, NGO e.g., RFCx)
- 96% accuracy of algorithm developed for jaguar ID
- Site started Green List journey

Impact to 300+ sites and beyond

Solutions and visibility

Web Hub

Visibility and international events

Flagship publications

Additional countries successes

Rwanda

- Country-wide Green List implementation
- Support ongoing tech implementation at Akagera NP to help achieve Green List

Seychelles

- Improve digital connectivity on Cousin Island to support conservation efforts
- Design and promote remote/virtual visitor engagement programme

Central Asia

- Support *Western Tien-Shan* transboundary World Heritage site
- Harness tech solutions in the region

Asia

- The IUCN Green List in Asia is successfully promoted through various forums and events
- **10+ countries** newly committed to the GL:
 - Bangladesh,
 - Cambodia,
 - India,
 - Maldives,
 - Mongolia,
 - Nepal,
 - Pakistan,
 - Sri Lanka,
 - Thailand, and
 - Timor Leste

Data management

- Digital Green List evaluation improved on the cloud-based IUCN database to support functions and interoperability with other platforms, i.e.:
 - IUCN GL website
 - World Database of PAs (WDPA)
 - PANORAMA

eCITES@asycuda.org

eCITES@ASYCUDA

Using state of the art information technology and information management approaches to combat illegal trade in wildlife

AUTOMATION CYCLE

Electronic support for all the steps of the permitting business process

Phase 1 - ePermit

- ▶ Request and issuance of ePermits (paper and electronic)
- ▶ Management and storage of CITES trade data for CITES annual reporting and quota management
- ▶ Inspection / risk assessments
- ▶ Payments

Phase 2 - eControl

- ▶ Permit information exchange with Customs
- ▶ Risk management and validation of quantities exported
- ▶ Single Window integration

Phase 3 - eReport

- ▶ CITES annual reports required under the provisions of Article VIII, par. 7 (b)
- ▶ Customised reports

Phase 4 - eExchange

- ▶ Exchange of national permit data between countries
- ▶ Cross-border traceability of CITES permits

THANK YOU!

Together for Nature : How can ITU standards foster action ?

Geneva March 4, 2024

Jean-Manuel Canet, ITU-T SG5 Vice-Chairman

Together for Nature : How can ITU standards foster action ?

ITU-T Study Group 5

EMF, environment, climate action, sustainable digitalization, and circular economy

- ICTs related to the environment, energy efficiency, clean energy and sustainable digitalization for climate actions
- Impact on Biodiversity
- Circular economy and e-waste management
- Electromagnetic compatibility, resistibility and lightning protection, Human exposure to electromagnetic fields...

- **Empowering change: new standards to come for biodiversity conservation**

Two Recommendations are under development in ITU-T SG5:

L.biodiversity footprint

Methodology for the assessment of the footprint of an ICT organization on biodiversity
Taking into account the different frameworks: CBD, CITES, SBTN, TNFD, CSRD, GBS...
Analysis of pressure points on ecosystems, on site versus aggregated levels

L.biodiversity opportunities

Development of guidance on how to assess the second order effects of ICT solutions on biodiversity, including positive effects.

e.g. how to assess the impact of AI, earth observation, bioacoustics, collection and analysis of biodiversity data such as state of species, population sizes, habitat changes...

Call to Action

Help us continue assessing the impact of ICTs on biodiversity

Join us:

Next SG5 Meeting:
17-21 June 2024
Wroclaw, Poland

ICT Actions for Biodiversity Enabled by International Standards

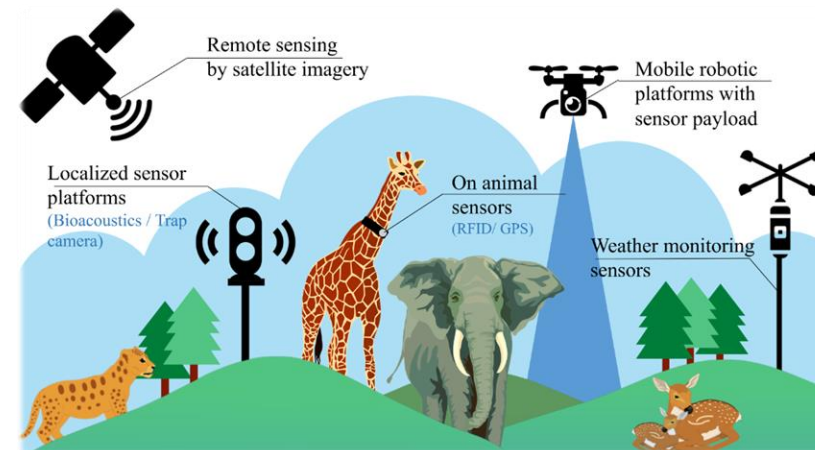

Annexes

4 March 2024

ICT and digital technologies impact on biodiversity

ICT helps on...

- Species identification and biodiversity monitoring
- Predictive modelling
- Habitat mapping and restoration
- Illegal activity detection
- ...

ICT and digital technologies impact on biodiversity

But more are needed on...

- Sufficient and accurate global biodiversity data
- Technical capabilities
- Standardized data collection procedures and operational environments
- Government involvement and legal support
- ...

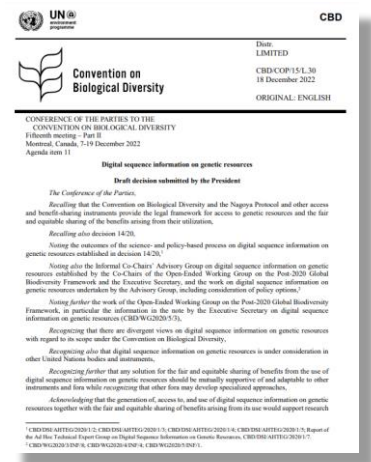

The Biodiversity plan related to the ICT sector

COP15 Goals

<p>GOAL A Protect and Restore</p>	<p>GOAL B Prosper with Nature</p>	<p>GOAL C Share Benefits Fairly</p>	<p>GOAL D Invest and Collaborate</p>
--	--	--	---

COP15 Targets related to ICT:

- **TARGET 1: Plan and Manage all Areas To Reduce Biodiversity Loss**
- **TARGET 8: Minimize the Impacts of Climate Change on Biodiversity and Build Resilience**
- **TARGET 14: Integrate Biodiversity in Decision-Making at Every Level**
- **TARGET 15: Businesses Assess, Disclose and Reduce Biodiversity-Related Risks and Negative Impacts**

ITU standards supporting biodiversity

ITU-T Study Group 5 - EMF, environment, climate action, sustainable digitalization, and circular economy

- L.Biodiversity footprint: Methodology for the assessment of the footprint of an ICT organization on biodiversity

Scope 1 biodiversity:

Impacts generated in the organization's area of influence and caused directly by the company's activities.

Scope 2 biodiversity:

Indirect impacts from the of purchased energy, heat or steam consumed by the organization.

Scope 3 biodiversity:

Indirect biodiversity impacts, other than scope 2 impacts, which are a consequence of an organization's activities but arise from sources that are controlled by other organizations.

- L.Biodiversity_opportunities: Development of guidance on how to assess the second order effects of ICT solutions on biodiversity, including positive effects

- How to assess?
- What are the ICT solutions in support of biodiversity protection and restoration?

Second Order Effect: *The impacts and opportunities created by the ongoing use and application of ICT.*

Thank you!

TRAINING PROGRAMME

WOMEN IN CONSERVATION TECHNOLOGY

According to our **State of Conservation Technology Three-Year Trends Report**, our analyses revealed that a range of financial and technical barriers might disproportionately affect women and individuals in developing economies.

As part of our mission to **empower underrepresented groups**, the Women in Conservation Technology Programme was developed to equip emerging female conservationists with foundational knowledge in conservation technology, advance their potential for impactful conservation careers, and create a supportive network of women working in the conservation tech community across East Africa.

NRT Community Conservation

- 22 NRT conservancies and 4 private reserves marking significant steps to a nationwide IoT conservation network in Kenya.
- Three new location for 2024 (Watch this Space).
- IoT is growing in conservation CCF know of 80 sites using this tech globally.

Key Applications

- Tourism Management
- Animal Behavior Monitoring
- Asset Monitoring
- Water Management
- Electricity Management
- Weather Monitoring
- Livestock Monitoring

REGULATORY CHANGES BRINGING TRANSFORMATION

- Protect 30% of the planet by 2030.
- Restore 30% of the planet's degraded terrestrial and marine ecosystems
- Creation of a new £510 million fund within UN / GEF. With commitments for future \$30 billion for biodiversity by 2030.
- Governments tasked to show scheduled progress against their national biodiversity contribution plans
- Finance takes centre stage, natural capital markets and innovative solutions
- Rise of 'Super Carbon credits' of higher value when also benefiting biodiversity and community development

FUTURE PLEDGE

Can you support 30 protected areas by 2030

Decreased on-the-ground effort, time & cost

- Less invasive
- Covers large areas (360°)
- Long, continuous time frames
- Survey multiple species simultaneously
- Permanent audio archive

HotSpots

17% of the most interesting areas, including existing protected areas. This is in line with the CBD's core habitats and Aichi targets

13% more to link core habitats (CBD)

Corridors

Disruptions

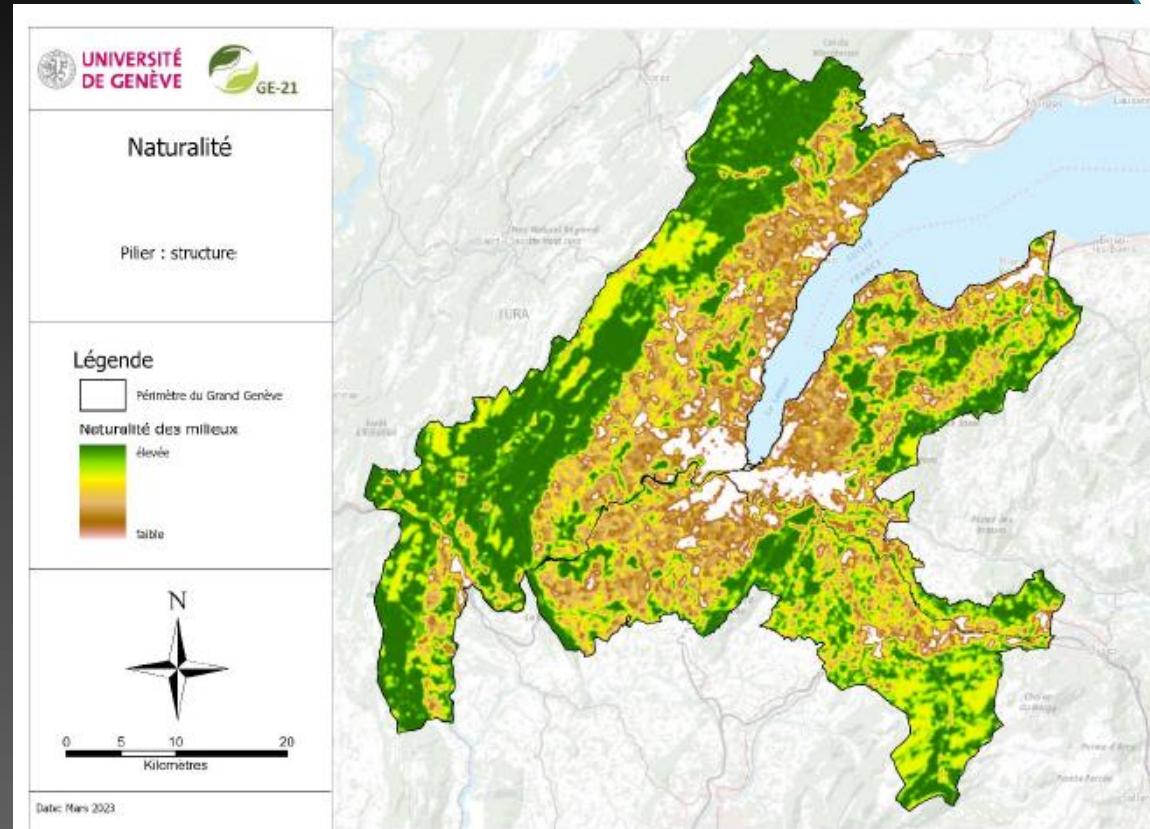

Eco-bridges

Landscape structure of the Greater Geneva

- Fragmentation (or continuity) index of natural habitats
- Permeability of land use classes
- Naturalness of the territory
- Diversity of green environments (Shannon index)
- Central zone indicator

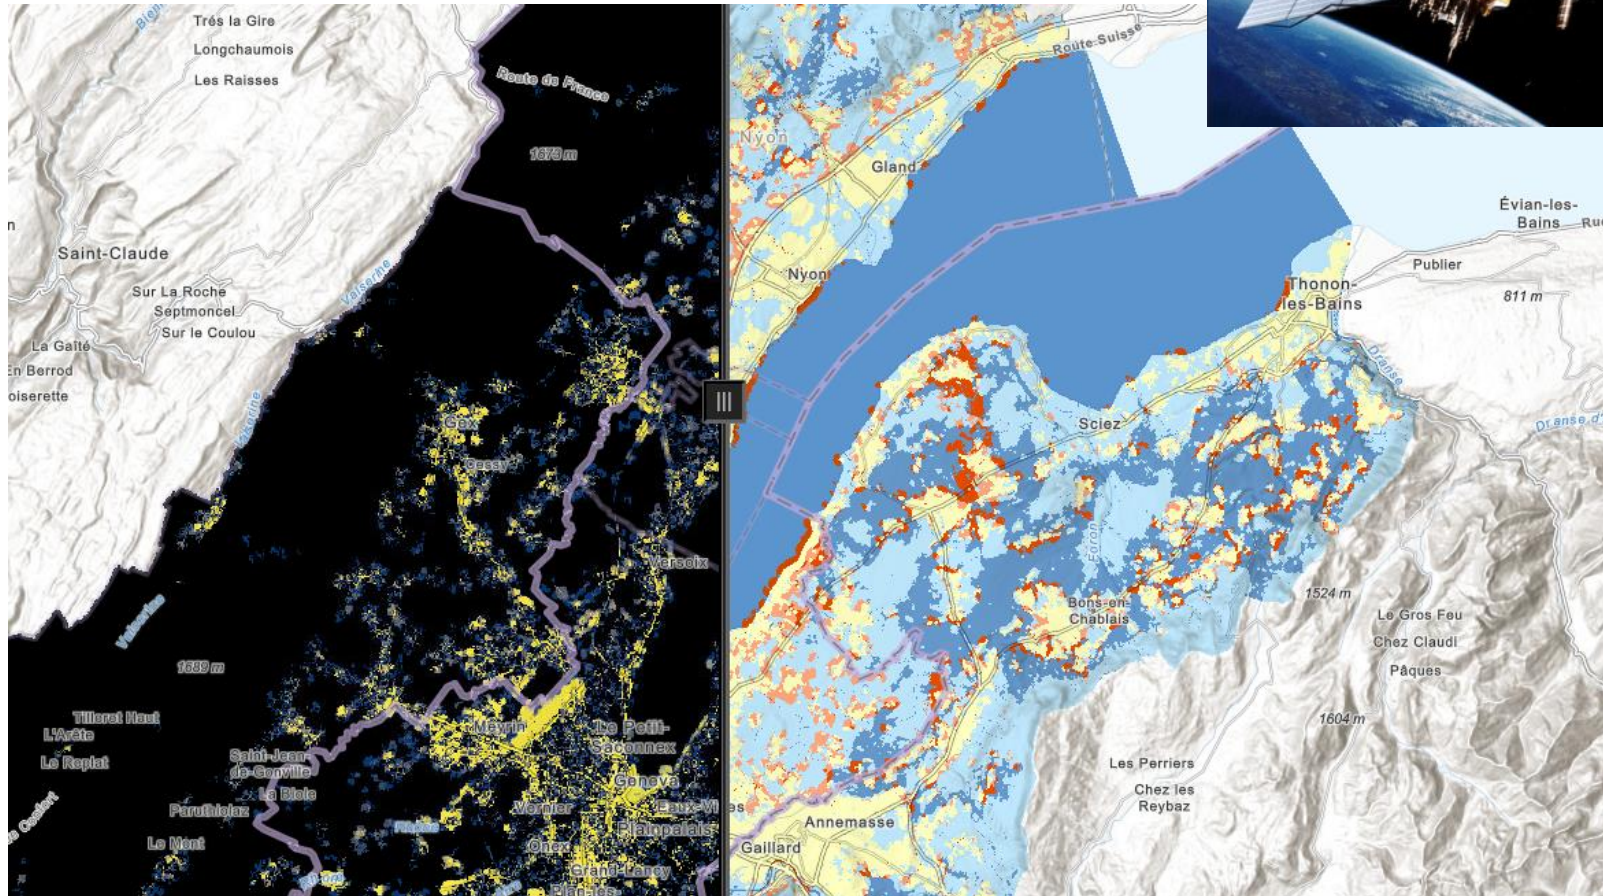

FragStats

Sanguet et al. 2023

Geneva's DARK Infrastructure

To reduce light pollution
Over 60% of the biodiversity need darkness, humans too!

Geneva's DARK Infrastructure

Trame verte et bleue

Merging Dark and Green infrastructure to identify pinch points

To identify conflicts zones reducing connectivity

Ajout de la lumière artificielle parmi les éléments fragmentants

Points de conflits incluant ceux provoqués par la lumière

Wild Fauna management – camera traps

Counting of populations, proof or reproduction, etc.

And some surprises...

(Cannabis smuggler)

Wild Fauna management – camera traps

Proof of presence or new arrivals

Eurasian golden jackal
Canis aureus

Wild Cat
Felis silvestris

European Wolf
Canis lupus

4 March 2024

Mandate to develop CITES-LEX

(Decision **19.62**) ... in the provision of legal assistance, cooperate with the legal programme of FAO

(Decision **19.130**) ... develop digital solutions to automate relevant parts of the Rapid guide for making LAFs, and maintain a dedicated webpage regarding the verification of legal acquisition for different taxa and specimens on the CITES website and update it regularly

International
Workshop on
Legal Acquisition
Finding

2022

Development

FAOLEX Team

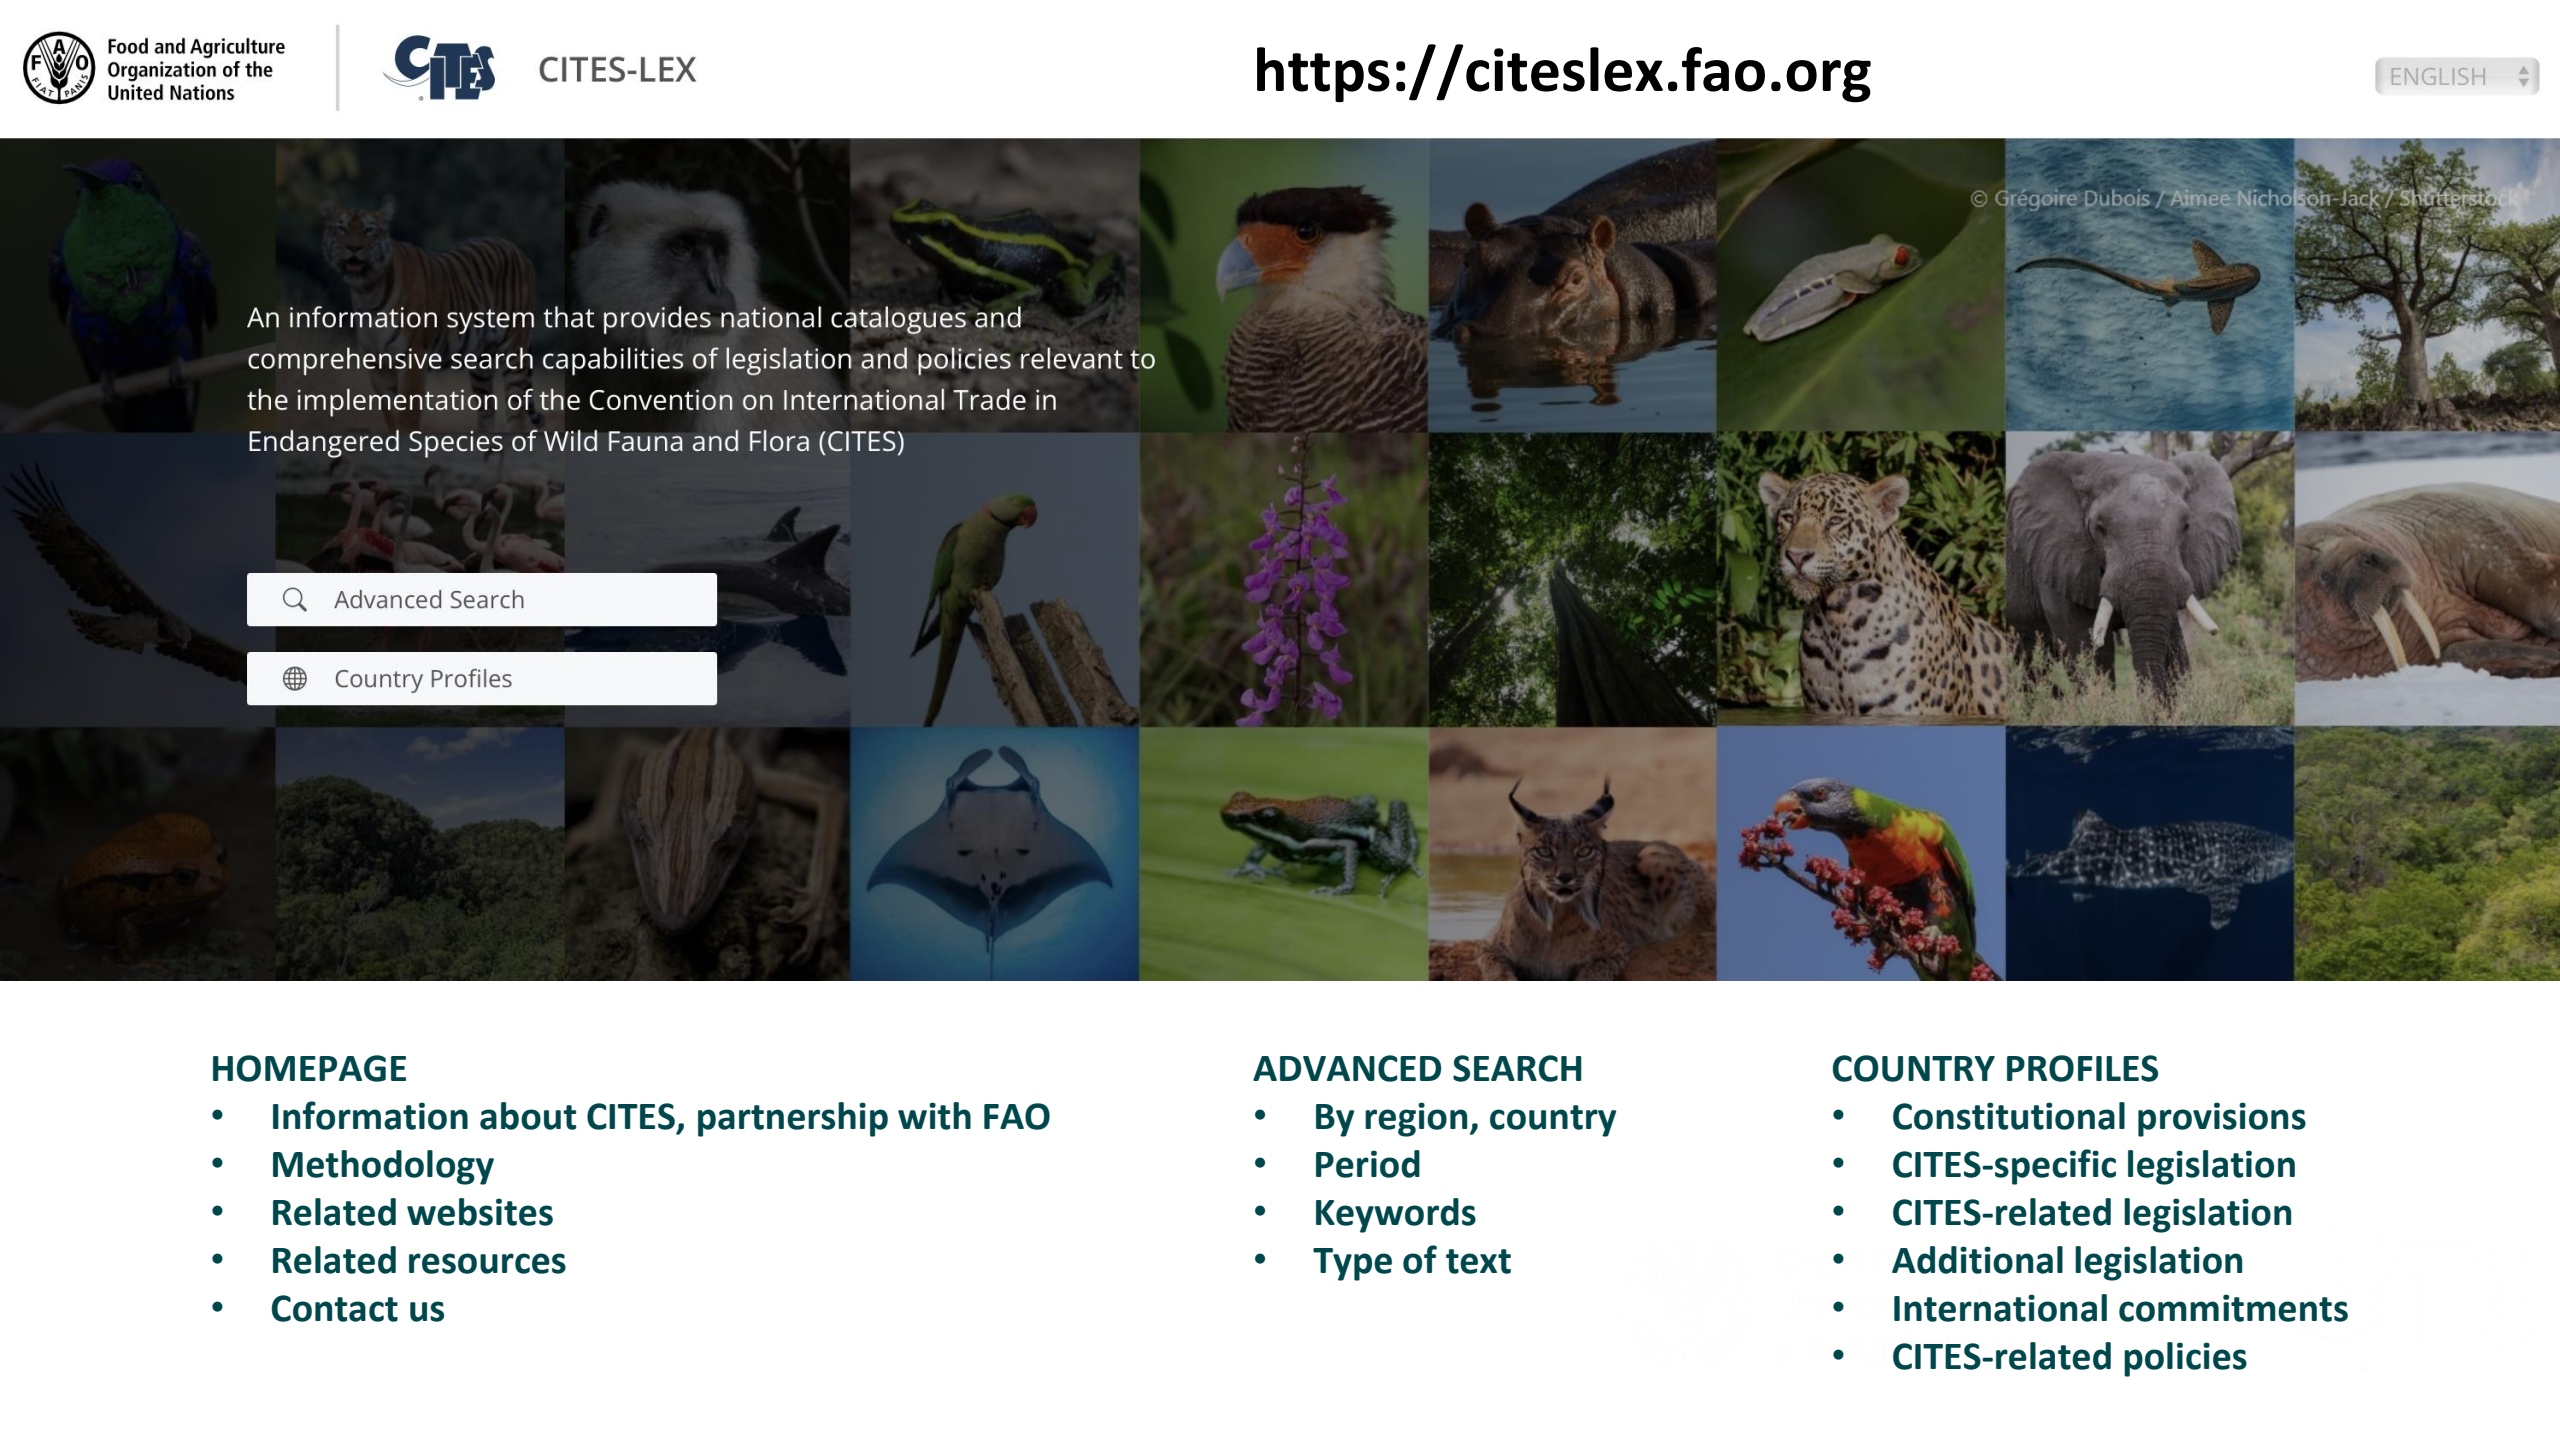

2023

Available to public

2024

An information system that provides national catalogues and comprehensive search capabilities of legislation and policies relevant to the implementation of the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES)

HOMEPAGE

- Information about CITES, partnership with FAO
- Methodology
- Related websites
- Related resources
- Contact us

ADVANCED SEARCH

- By region, country
- Period
- Keywords
- Type of text

COUNTRY PROFILES

- Constitutional provisions
- CITES-specific legislation
- CITES-related legislation
- Additional legislation
- International commitments
- CITES-related policies

Next steps

Dissemination

- Video to promote and facilitate the use of CITES-LEX

Improvement

- Notification to the Parties to request review of country profiles
- Incorporate technical inputs received

Fundraising

- Maintenance
- Further develop CITES-LEX into a more comprehensive system for assisting States in the making of LAFs

2024
